Attachments: removed.txt; Residential action levels converted to ppb.xlsx; 40 ppm compare 5 ppm_John Day - PRG EPA RSLs_Air.xlsx

Brooks,

Attached are two tables:

- The "Residential Action Levels..." table lists the main constituents found thus far (based on HAPSITE data from (b) (6) and displays the EPA RSLs (displayed in ug/m3), and converts those values to ppm/ppb (which is what the MultiRAE and UltraRAE instruments display). Additionally, the second to last column displays each analyte if present as 1 ppm in the equivalent values of each compound in ug/m3.
- The "40 ppm compare 5 ppm..." table lists the HAPSITE reported values for (b) (6), in the blue columns, displayed in ppm, and ug/m3. This table also shows the values based on assuming values of similar ratios of the contaminants present at 40 ppm (which was the MultiRAE reading present at (b) (6) and broke it down to concentrations present to a ratio at 5 ppm, 1 ppm, etc. if read on the MultiRAE.

Thanks
